

Toucan Active Instructions

Salt brine dispenser. 2.5ltr container with a 30ml "Pelican" pump. One "pump" of 30mls brine solution for every 10ltrs of water in the tank. The bottom of the container is lined with ordinary salt tablets and then filled with tap water, this makes a super saturated salt brine solution. As the salt brine solution decreases in the dispenser because of usage, just fill up again with water. At some point over several weeks the salt tablets will have dissolved, you then simply add more tablets to cover the bottom of the container and add water.

Generator: on/off switch is on the right-hand side. Press button on the front to start activation process, the green light will turn blue for 15 minutes whilst activation process is taking place in the tank. When blue light turns back to green then the solution is ready to use.

Tank: 10lt tank to be filled with ordinary tap water.

Dispensing tap: to put activated solution into spray bottles or buckets.

Instructions:

1. Fill 10ltr tank with tap water, then add 1 x "pump" (30ml) of brine solution into the tank. **1 PUMP (30ml) IS SUFFICIENT – DO NOT ADD ANY MORE AS THIS WILL CAUSE THE DEVICE NOT TO ACTIVATE!**
2. Switch on generator, light will show green, press the button once and light will go from green to blue. Activation process is now taking place and will last 15minutes.
3. When activation is finished blue light goes back to green and the solution is ready to dispense into spray bottles and buckets via the dispensing tap.
4. When more solution is needed just repeat the actions above in the same order.

The solution made is dual purpose, an excellent sanitiser that will kill on contact and also a very good cleaning product for everyday use. The solution has undergone stringent laboratory scientific testing. The solution made is non-toxic, non-allergenic, non-hazardous to people or animals and is environmentally friendly.
